## Survey Report

NEIL 4/WI Survey Task Order G16PD00498 / G17PD00315

April 2017

### 1.0 Survey Report

The Dewberry team utilized Ayres Associates to perform the acquisition of survey data to assist Harris Corporation in establishing and verifying positional accuracy of Harris' Geiger-mode LiDAR data. The survey data includes the acquisition of LiDAR-identifiable Ground Control Points (GCPs) to calibrate the LiDAR data, and the acquisition of Check Points to verify / validate the positional accuracy of the LiDAR data. In addition to the survey outlined below, Dewberry will also be acquiring ~50 additional Check Points distributed across the 2 project AOI to independently verify the data against.

#### 1.01 Project Summary

This project comprises two contiguous Task Orders G16PD00498 and G17PD00315 and had the following minimal number of survey points to be measured.

Site Name	AOI Size (SqMi)	PRI	Point Types	Total	Land Cover Class	
					NVA-Non-vegetated Vertical Accuracy (includes bare-earth, open terrain and urban areas)	VVA-Vegetated Vertical Accuracy (includes tall weeds, crops, brush-land, trees and forested land covers)
G16PD00498 & G17PD00315	3,816	1	Calibration Control Points (GCPs)	62	62	N/A
			ASPRS Vertical Accuracy Check Points	115	32	52
			ASPRS Vertical Accuracy Check Points (*PIDs)		32	
			ASPRS Horizontal Accuracy Check Points (*PIDs)	28	28	N/A
			Additional Horizontal Check Points (NVA), as req. for certification (i.e. Surveyor)	N/A	N/A	
			Total	205	154	52

### 1.02 Point of Contact and Professional Certification

Ayres Associates had a 5-person team, including one project manager, one technical lead, and three crew chiefs. Todd Mrochek, PLS, PE, is the technical lead and surveyor of record certifying information in this report. The primary point of contacts are as follows:

#### Ayres Project Manager

Jason Ingram, WI PLS

#### Ayres Project Manager

3376 Packerland Drive

Ashwaubenon, WI 54115

Phone: 920.498.1200

Office Ext: 7857

Cell: 920.366.4434

E-mail: [IngramJ@AyresAssociates.com](mailto:IngramJ@AyresAssociates.com)

#### Ayres Technical Lead/Surveyor of Record

Todd Mrochek, WI/IL PLS, PE

3433 Oakwood Hills Parkway

Eau Claire, WI 54701-7698

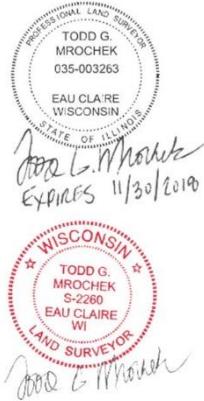

Phone: 715.834.3161

Office Ext: 7615

Fax: 715.831.7500

Cell: 715.214.5723

E-mail: [MrochekT@AyresAssociates.com](mailto:MrochekT@AyresAssociates.com)

### 1.03 Project Area

The project area encompasses approximately 3,816 square miles throughout Upper Northeast Illinois and Lower South East Wisconsin as identified in the following diagram.

#### 1.04 Survey Equipment

Equipment used for the execution of the ground control survey includes Trimble GNSS/GPS receivers and Trimble Robotic Total Station. Each GNSS setup included a rod and bipod setup. Total Station setups included an instrument and backsight setup on a tripod, and the point of measurement was occupied by a rod and bipod. Both methods of measurements used the Trimble TSC3 Data Collector to record observations. The following images represent the typical instrument setup:

Specific instrument details are as follows:

GNSS/GPS Receivers

75.23 Trimble R8 GNSS SN5126468515  
74.58 Trimble R8-3 GNSS 2010 SN5004413097  
75.50 Trimble R10 GNSS 2013 SN5304424243

Total Station

74.77 Trimble S6 Total Station SN92722266  
75.38 Trimble S6 Total Station SN93410182  
75.41 Trimble S6 Total Station SN93410052

### 1.05 Survey Point Detail

The measured location of each point was marked at ground level with a survey nail in non-vegetative areas and by a wooden hub in vegetative locations. When possible a 3" reflector was secured at these locations. The following images represent a typical survey point.

### 1.06 Network Design

Established Virtual Reference Systems (VRS) and Continually Operating Reference Stations (CORS) proven to be reliable within this project area were used for the control network. Two specific networks were used. Wisconsin Continuously Operating Reference Station Network (WISCONS) was used in Wisconsin, and Trimble's VRS Now Network was used in Illinois. Both networks state they can achieve accuracy better than project requirements. Information on each network can be found at the following locations:

WISCONS <http://wisconsindot.gov/Pages/doing-bus/eng-consultants/cnslt-rsrcses/tools/wiscors/default.aspx>

VRS Now <http://www.trimble.com/positioning-services/vrs-now.aspx>.

### 1.07 Field Survey Procedures and Analysis

The field survey effort was executed over 4 weeks. The first week focused on the placement of the Calibration Control Points (GCPs). The second week's effort entailed taking the second set of observations on the GCPs. Once the GCPs were complete, the non-vegetated (NVA) and vegetated (VVA) check points were established and measured.

VVA points land cover category is recorded as an abbreviation on the photos taken of the point. The

Dewberry Consultants LLC  
1000 N. Ashley Drive, Suite 801  
Tampa, FL 33602-3718  
813.225.1325  
813.225.1385 fax  
[www.dewberry.com](http://www.dewberry.com)

following abbreviations indicate the corresponding land cover:

W = Tall Weeds

C = Crops

B = Brush

F = Forested Areas/Trees

The measurement procedure for all points included performing up to four (4) individual, 90 second Real Time Kinematic (RTK) observations from the identified VRS Networks. Measurements were only accepted by field staff if the Positional Dilution of Precision (PDOP) was below 6.0 and the elevation mask was set at 15 degrees. At least one (1) measurement on each point was observed during a different satellite constellation.

The set of measurements for each point was evaluated within Trimble Business Center (TBC) software to ensure Local Network accuracy of 5 cm at the 95% confidence level both horizontally and vertically where achieved.

National Geodetic Survey (NGS) monuments were researched and measured throughout the project area. In cases where a monument was near the Wisconsin/Illinois border, NGS monuments were measured with both VRS Networks to ensure consistency between networks and NGS ground control. Analysis of these observations proved that the networks were within the accuracy requirements of this project.

The following NGS monuments were measured. It was found that the Wisconsin-based NGS control was more consistently accurate than Illinois. Primary reason is that Wisconsin has had extensive NGS Height Modernization efforts that has restored most aging ground-based monuments, whereas Illinois has not completed its efforts, and many of the NGS monuments found were older and more likely to have moved over time or have not recently been adjusted. The difference indicated next to the NGS Permanent Identification (PID) shows the difference in values between the NGS Data Sheets and our observations. Values are only shown if there was a survey grade value on the datasheet.

### 1.08 Adjustment

Network adjustments were not required for this project since the stated VRS Networks were used. Redundant RTK measurements on each point were evaluated to ensure the project accuracies were achieved.

### 1.09 Quality Control Procedures

Ayres Associates implemented procedures that have been proved on previous projects to provide consistent and accurate measurements within the accuracy requirements of this project. Quality control procedures include the following:

- Consistent team throughout the execution of the work.
- Nightly download of data and review, including the updating of a spreadsheets showing which points were observed the first and final time.
- Daily technical lead and team review of the work to be completed for that day to ensure all observations are made.
- Ayres Associates technical lead, Todd Mrochek, who is professional land surveyor (PLS) in Wisconsin and Illinois, was in the field for the first two weeks of observations to ensure proper procedures and VRS Network checks were made. Evaluation of these checks were made in real time.
- Our technical lead met Terry Hammarquist of Harris Corporation in the field to go over proper point evaluation and procedures. Other Ayres crew chiefs also met with Terry to go over the project requirements.
- Survey points were measured with a rigid setup, including a leveled survey rod and bipod for stability.
- Photos were taken of each point setup with information placed on a dry erase board next to the point in the photo documenting the observation setup and surrounding areas.
- Office evaluation of each point ensuring project requirements are met.

- Project PLS review of deliverables and content with additional review from another team member of photos and point values to confirm correct matching of data sets.

#### 1.10 Final Coordinates

Final coordinate values are reported in two Spatial Reference Data Systems as indicated as follows. Note that the reported elevations are the elevation at ground level. Measure ups to objects above ground are reported in the field notes.

<b>Spatial Reference Data - Illinois</b>	
Coordinate Reference System	Illinois East State Plane Coordinate System
Unit of Reference	US Survey Foot
Horizontal Datum	EPSG 6455: North American Datum of 1983, 2011 Adjustment
Vertical Datum	EPSG 6360: North American Vertical Datum of 1988 (NAVD 88)
Geoid Model	GEOID 12B
<b>Spatial Reference Data - Wisconsin</b>	
Coordinate Reference System	Wisconsin South State Plane Coordinate System
Unit of Reference	US Survey Foot
Horizontal Datum	EPSG 6609: North American Datum of 1983, 2011 Adjustment
Vertical Datum	EPSG 6360: North American Vertical Datum of 1988 (NAVD 88)
Geoid Model	GEOID 12B

The final coordinate locations are represented on the following diagrams:
